# THE EXIT WINDOW IS REOPENING

## Is Your Portfolio Infrastructure Ready?

The market is moving again.

Exits are accelerating. IPO activity is up. M&A volume is climbing. And secondary transactions are now the primary liquidity channel.

But this isn't a return to the same old playbook. Valuations have become increasingly tied to operational maturity. Buyers, meanwhile, have less tolerance for execution gaps. And in a higher-rate environment, delays and rework directly impact EBITDA, cash conversion, and exit timing.

This means you can no longer view field execution as a "below the line" activity. **Not when:**

- Deployments are more complex and interdependent
- Expansions and add-on integrations happen faster
- Diligence expectations favor proof over promises

In this environment, predictable, consistent execution is now a core part of your value-creation story.

## A Quiet Liability

Unfortunately, the field services industry has become less reliable at the exact moment demand surges.

Large providers increasingly rely on underqualified subcontractors that may arrive unprepared or without the right tools. Scoping could devolve into finger-pointing, causing schedules to slip and sites to miss go-live dates.

Meanwhile, closeout documentation may be incomplete, inconsistent, or missing entirely.

In the end, what should be a predictable process becomes chaotic. And the impact can quickly reverberate across your portfolio:

Site openings slip by **60-90 days**

Second visits inflate costs by **25-40%**

Integration timelines stretch by another **12-18 months**

Diligence turns into a scavenger hunt without audit-ready proof

**Make no mistake:** these aren't simple inconveniences. They're execution risks — and in this market, execution risk is valuation risk.

The question you need to ask yourself isn't whether infrastructure matters. It's whether your portfolio can execute at scale, with discipline, speed, and proof — across every location, every time.

# The New Standard

## FIRST-TIME-RIGHT EXECUTION

The price of sticking with the traditional field services model — and all the questions, concerns, delays, and unforeseen costs that come with it — is now too steep to bear.

That's why sophisticated firms are shifting their posture. They're no longer viewing field execution as a vendor problem. Now, they're treating it as a strategic imperative with a direct impact on risk, revenue, and reputation.

When you partner with PurTera IT, you'll benefit from decades of field operations expertise paired with modern orchestration technology and audit-grade proof-of-work closeout, creating an approach built on discipline and intelligence.

This way, you'll be able to:

**Trust in your deployments:** Work with operators who've solved your exact challenges at enterprise scale, know what it takes to deploy across hundreds of locations, and arrive prepared, on time, and equipped, eliminating the chaos that derails multi-site programs.

**Eliminate execution risk:** Utilize a proprietary AI-driven PMO platform running 13+ specialized decision models — designed to verify readiness, predict risk, and prevent rework — so you can avoid the execution variability and cost overruns that plague traditional field services.

**Protect what matters most:** Execute deployments with confidence, knowing we'll protect your critical relationships and business outcomes, open locations on schedule, and complete infrastructure refreshes without business disruption.

PurTera IT was built for this moment. With our blend of operator-built discipline and intelligent systems that learn from every project, you'll prevent failures that destroy margins and diminish your reputation.

Because when the exit window is open, infrastructure can't be just "good enough."

**It has to be predictable — every site, every time.**
